

System Description

Cisco Global Certification Team (GCT), Defense Programs (DP) Internal Compliance Review (ICR) Session Border Control (SBC) Certification Test

This document presents a high-level overview of the system under evaluation, outlining its core functionalities and providing a concise discussion of its individual components and their respective applications. The purpose of this guide is to furnish readers with a foundational understanding of the system and its capabilities. For comprehensive technical details regarding the solution or any of its constituent components, readers are encouraged to consult Cisco's official website at www.cisco.com.

System Description

The Cisco Session Border Controller (SBC) enables secure and reliable IP-to-IP AS-SIP communications between Session Controllers (SCs) that support the UCR Alternative B failover mechanism and their associated end instruments, across the Unified Capabilities (UC) Network. The SBC interfaces with DISN UC systems via an AS-SIP interface, delivering robust IP-to-IP connectivity between edge components (Local Session Controller [LSC] / Enterprise Session Controller [ESC]) and core infrastructure (Softswitch) within the UC environment. Key functionalities of the SBC include AS-SIP signaling, comprehensive encryption services, and facilitation of end-to-end secure communications across the UC Network. Additionally, the solution can be integrated with a Cisco Session Controller to provide advanced interworking and SBC functionalities.

Component Description

The following components are included in the solution.

1. **Interworking Gateway (IWG) and Session Border Controller (SBC) Combined (IWBC):** The Cisco Unified Border Element (CUBE) can be deployed to provide both Interworking Gateway (IWG) functions and Session Border Controller (SBC) functions in a single chassis when deployed with the Cisco Collaborative environments. This capability is available in IOS XE software on all IWG and SBC platforms and has been termed an IWBC by Cisco. All Cisco Session Border Controller (SBC) and Interworking Gateway (IWG) can be deployed in pairs to provide High Availability (HA) and failover redundancy.
2. **Session Border Controller (SBC):** The Cisco Session Border Controller (SBC) deployment as part of the SS provides critical SIP message normalization functionality that allows for interoperability between components within the Unified Capabilities architecture. Cisco Session Border Controller (SBC) can be deployed in pairs to provide high availability. This is accomplished by using Hot Standby Routing Protocol (HSRP).

SBC on C8000V	IOS XE 17.18	N/A	SBC provides connectivity to AS-SIP trunks.
SBC on C8200-1N-4T SBC on C8200L-1N-4T	IOS XE 17.18	N/A	SBC provides connectivity to AS-SIP trunks.
SBC on C8300-1N1S-6T ¹ SBC on C8300-1N1S-4T2X SBC on C8300-2N2S-6T ¹ SBC on C8300-2N2S-4T2X ¹	IOS XE 17.18	N/A	SBC provides connectivity to AS-SIP trunks.
SBC on ISR 4461/K9	IOS XE 17.18	N/A	SBC provides connectivity to AS-SIP trunks.

Desktop Review (DTR) 1

This DTR updates the Session Border Controller (SBC) IOS XE software on the C8300 series, the C8200 series, the C8000v series of SBC router platforms. The IOS XE software version is being updated from IOS XE 17.18 to IOS XE 26.1.

The ASR 1006-X will be sustained on the current software load of IOS XE 17.18.

DTR Detailed Component Information

Component	Release	Sub-component	Function
Interworking Gateway on ASR 1006-X	IOS XE 17.15	N/A	Interworking Gateway, provides connectivity to AS-SIP trunks
Session Border Controller on ASR 1006-X	IOS XE 17.15	N/A	Session Border Controller provides connectivity to AS-SIP trunks.
Interworking Gateway/Session Border Controller on ASR 1006-X	IOS XE 17.15	N/A	Interworking Gateway/Session Border Controller, provides connectivity to AS-SIP trunks.
Interworking Gateway on C8300-1N1S-6T ¹ Interworking Gateway on C8300-1N1S-4T2X Interworking Gateway on C8300-2N2S-6T ¹ Interworking Gateway on C8300-2N2S-4T2X ¹	IOS XE 26.1	N/A	Interworking Gateway, provides connectivity to AS-SIP trunks.
Session Border Controller on C8300-1N1S-6T ¹ Session Border Controller on C8300-1N1S-4T2X Session Border Controller on C8300-2N2S-6T ¹ Session Border Controller on C8300-2N2S-4T2X ¹	IOS XE 26.1	N/A	Session Border Controller provides connectivity to AS-SIP trunks.
Interworking Gateway/Session Border Controller on C8300-1N1S-6T ¹ Interworking Gateway/Session Border Controller on C8300-1N1S-4T2X Interworking Gateway/Session Border Controller on C8300-2N2S-6T ¹ Interworking Gateway/Session Border Controller on C8300-2N2S-4T2X ¹	IOS XE 26.1	N/A	Interworking Gateway/Session Border Controller, provides connectivity to AS-SIP trunks.
Interworking Gateway on C8200-1N-4T Interworking Gateway on C8200L-1N-4T ²	IOS XE 26.1	N/A	Interworking Gateway, provides connectivity to AS-SIP trunks.
Session Border Controller on C8200-1N-4T Session Border Controller on C8200L-1N-4T ²	IOS XE 26.1	N/A	Session Border Controller provides connectivity to AS-SIP trunks.

Component	Release	Sub-component	Function
Interworking Gateway/Session Border Controller on C8200-1N-4T Interworking Gateway/Session Border Controller on C8200L-1N-4T ²	IOS XE 26.1	N/A	Interworking Gateway/Session Border Controller, provides connectivity to AS-SIP trunks.
Interworking Gateway on C8000v	IOS XE 26.1	N/A	Interworking Gateway, provides connectivity to AS-SIP trunks.
Session Border Controller on C8000v	IOS XE 26.1	N/A	Session Border Controller provides connectivity to AS-SIP trunks.
Interworking Gateway/Session Border Controller on C8000v	IOS XE 26.1	N/A	Interworking Gateway/Session Border Controller, provides connectivity to AS-SIP trunks.
Notes: 1. Certification through similarity based on the C8300-1N1S-4T2X 2. Certification through similarity based on the C8200-1N-4T			

Management Description

The SBCs are managed via SSHv2 on the management network or via a console cable with a terminal connection. Security and auditing can be performed through configuration to a Cisco Identity Services Engine (ISE) server or similar Site-Owned Remote Auxiliary Equipment (RAE) services that are integrated with Active Directory and syslog server to collect alarm and modification information of the system.

Obtaining Further Documentation and Support

For information on obtaining documentation, obtaining support, providing documentation feedback, security guidelines, and recommended aliases and general Cisco documents, visit Cisco's public website at <http://www.cisco.com/>
